Zesto Coffee: Shopify, Amazon UK & SEO Work Sample

UK specialty coffee brand | Shopify store + Amazon UK | September to November 2026 (ongoing) | Pooya Hayati

My role: I run SEO, Shopify store development and marketplace setup for the brand, working directly with the owner. Everything below was done by me.

1. Keyword research and site structure

- Full keyword research for the UK specialty coffee market (Google and Amazon), grouped by search intent and mapped to pages.
- Decided which pages exist, which keyword each targets and how they link together (coffee products, subscriptions, office coffee, wholesale, gifts).
- Result: every main page has its own target keyword, a unique title and description, one clear H1 and FAQs, so pages no longer compete with each other.

2. Competitor and offer research

- Analysed UK competitors' range, pricing, shipping terms and subscription offers (discounts, free shipping, guarantees, gifts) and used it to design the brand's own offers for home, office, wholesale and gift customers.

3. Amazon UK and Google Merchant Center

- Listed all three coffees on Amazon UK and built A+ Content that matches the new site design; added "Buy from Amazon UK" links on the website product pages.
- Listed the products in Google Merchant Center with product structured data; completed shipping, returns, contact and business profile settings, and created the policy pages Merchant Center requires.

4. Shopify store

- Redesigned the coffee product pages: photo slider, clearer buy box, always-visible Add to Cart and an app-style mobile layout. Rewrote the copy with exact blends, tasting notes, brewing tips and FAQs; fixed and restyled customer reviews.
- Built three subscription landing pages (home, office, gift) with plans pages, based on keyword research and search volume, plus a wholesale page and a B2B sample/quote request flow with automatic emails, all connected to Klaviyo.
- New homepage, menu and footer, with a free-shipping bar, blog slider and email sign-up.

5. Technical SEO and tracking

- Unique Google title and description for every product, one H1 per page, product codes, descriptive alt text on all product images, and structured data for the business, products and FAQs.
- Installed Google Tag Manager and GA4 properly and removed duplicate tracking.
- Search Console: fixed all errors, requested indexing for all new and updated pages; all pages are now indexed.

6. Problems diagnosed and fixed

- The "Subscribe" button created one-off purchases instead of subscriptions.
- Free-shipping and promotion rules were not applying correctly.
- The whole site froze after closing the email pop-up.
- A wrong placeholder price showed on the subscription page, and "Sold out" appeared wrongly on product pages, including for EU customers.
